## Minimum operations to make GCD of array a multiple of k

统计最小的操作次数来使得整个数组中所有数字的GCD为k(操作意味着对数字加1或者减1)

对每一个数字a[i]( a[i] != 1) ,要么让它等于k,要么让它为k的倍数,取操作次数小的情况,则有

- 1. a[i] > k,比较a[i]成为k和成为k的倍数的代价 min(a[i] % k,k a[i] % k)
- 2. a[i] < k,直接取 k a[i]

```
#include <bits/stdc++.h>
using namespace std;
int makeGCD(vector<int> &arr, int k) {
   int count = 0;
    for (auto a: arr)
        if (a != 1 && a > k) {
            count += min(a \% k, k - a \% k);
           count += k - a;
   return count;
}
int main() {
   vector<int> arr = \{4, 9, 6\};
   int k = 5;
   printf("%d\n", makeGCD(arr, k));
   return 0;
}
```
