Minimum Fibonacci terms with sum equal to K

给定数值K,选择Fibonacci数列中最少的项,使这些项的和为K

- 1. 首先找到最后一个小于或者等于K的Fibonacci项的下标
- 2. res += K / dp[idx] 除法相当于多次的减法
- 3. k %= dp[idx] 取于,此时K已经减去了最多的dp[idx]成分了

```
#include <bits/stdc++.h>
using namespace std;
int minFiboWithSumK(int &K) {
   vector<int> dp(100);
   int res = 0, idx = -1;
   dp[0] = 0, dp[1] = dp[2] = 1;
    for (int i = 3; i < dp.size(); ++i) {
        dp[i] = dp[i - 1] + dp[i - 2];
        if (dp[i] > K) {
            idx = i - 1;
            break;
    while (K > 0) {
       res += K / dp[idx];
        K %= dp[idx--];
    return res;
}
int main() {
   int T;
   scanf("%d", &T);
   while (T--) {
        int K;
        scanf("%d", &K);
        printf("%d\n", minFiboWithSumK(K));
    return 0;
}
```
